

Abstract

1. A dispensing head for a dosing device.
- 2.1 A dispensing head for a dosing device comprising an outer component part which has at least one outlet nozzle, and comprising an inner component part which has a flow-channel arrangement for supplying a medium to be dispensed to the outlet nozzle, whereby a flow-guiding system, in particular a swirler device, viewed in dispensing direction, is placed in the path toward the outlet nozzle, is known.
- 2.2 The flow-guiding system is according to the invention integrated in the outer component part.
- 2.3 Use for cosmetic sprayers.
3. Figure 1.
